## **DETAILED ACTION**

### ***Amendment***

1. The Amendment filed 07/06/2007 has been entered. The present Office Action is made with all the amendments being fully considered.

Claims 1-13 have been amended.

New claims 14 and 15 have been added.

Claims 1-15 are pending in this office action.

### ***Claim Objections Withdrawn***

2. Claims 1 and 7 having been properly amended, the previous objections are now withdrawn.

## **ALLOWANCE**

3. Claims 1-15 are allowed.

### ***Reasons for Allowance***

4. The following is an examiner's statement of reasons for allowance:

► Regarding independent claims 1 and 8, the pertinent prior art fails to teach a method or device of measuring the lubricating oil consumption of an internal combustion engine using a radioactive tracer that allows the emitted radiation to be measured continuously, while the engine is in use.

Art Unit: 2881

► Claims 2-7 and 9-15 are also allowed because of their dependencies, either directly or indirectly, upon previously allowed claims 1 or 8.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### ***Relevant Prior Art***

6. This prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

► USPAT 3,471,696 issued to Moore et al. teaches a radioactive tracer device/method for the same purpose as the present invention. However, Moore's device or method does not allow the emitted radiation to be measured continuously, while the engine is in use, but only intermittently for a period of 1 minute, as recited in Col.6/ll.53-68 in reference to Fig.4.

► USPAT 5,445,964 issued to Lee et al. teaches a non-radioactive method for the same purpose as the present invention, in which the amount of oil consumption is measured continuously, while the engine is in use. However, Lee et al. do not use radioactive tracer, but determines the amount of oil consumption by laser diode spectroscopy. It is non obvious to one of ordinary skill in the art to combine Lee's invention with Moore's, thus rendering the claimed invention unique.

Art Unit: 2881

► USPGPub 2007/0150161 issued to Dequenne teaches a radioactive tracer device/method which allows the emitted radiation, and hence, also the oil consumption, be measured continuously, while the engine is in use. However, Dequenne's priority date (6/21/2006) is predated by the present application (9/6/2002).

► USPGPub 2006/0237640 issued to Delvigne et al. (the same inventor entity as the present application) also teaches a radioactive tracer device/method that allows the emitted radiation be measured continuously while the engine is in use. However, Delvigne's 2006/0237640 application has a later filing date, and furthermore, is dedicated to a different purpose (i.e., for determining engine damage). Although an Obviousness Double Patenting (ODP) may still be applicable, due to the later filing date and the different claim preamble, such an ODP is not issued in this office action. A note has been attached to the 2006/0237640 application (SN 10/539374), in order to allow the ODP issue be better explored.

### ***Communications***

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bernard E Souw, Ph.D., whose telephone number is 571 272 2482. The examiner can normally be reached on Monday thru Friday, 9:00 am to 5:00 pm..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Kim can be reached on 571 272 2293. The central fax phone
